

Release date: 2023-01-31

Harmony Released Features

- Feature 19256/ECS-8576: Warehouse - Transfer order**
 We have added functionality that supports movement of items between different warehouses in an efficient way. It is possible to generate a "transfer order" from the outbound warehouse that will support the goods reception at the inbound warehouse. The solution will also generate accounting statics for the transfer.
 This is an add on functionality.
- Feature 19256/ECS-8576: Voyado - Control of Store receipts on returns**
 This change only applies to store purchases sent to Voyado. If a customer makes a return that can be linked to a store receipt for a purchase that the customer made before the customer signed their Membership Agreement, the return will not be sent to Voyado. E-commerce returns already work this way.
- Feature 24730/ECS-6485: Voyado - Update purchase in Voyado for Specified customer**
 Additional function (customization required) - Updating Online report PXXDLSRESENDTOCRM that transfers purchases to Voyado for specified customer number and period. We assign a unique value for each invoice/purchase in the id "uniqueReceiptId" which Voyado uses to ignore duplicate transactions.

Harmony Desktop Client

- Reload of Harmony for a new version is required.

Important information Release May 9 2023

We intend to terminate an older service we see no longer fulfills any function.

The service refers to our handling of Offline transactions.

The service was set up primarily to handle Offline transactions in connection with our previous major weekend releases. As the vast majority of our customers have their own offline management at their websites and our release procedure has changed this service does not fulfill any function with us.

We intend to end the service in connection with the release on **May 9** and we urge you to secure your own offline solutions with your Web partner.

More information about Offline Handling can be found in our document [The web service methods](#)
