

The logo for evolution commerce, featuring the word "evolution" in a white, lowercase, sans-serif font above the word "commerce" in a similar font. A stylized white square icon with a smaller square inside is positioned to the left of the text.A photograph of a white sign with a blue border hanging from a string. The sign has the word "OPEN" in large, bold, grey, 3D block letters. The background of the sign is blue. The sign is set against a blurred background of what appears to be a store interior.

Release information

Harmoney Desktop Client

Update is required

Set the checkmark "Print" by default on the prepayment invoice

Parameter for marking default "Print" for a prepayment invoice.

This is controlled by a parameter on Sales channel level.

This is an add on functionality.

Reactivate Bonus voucher when returned

We have made a change in the process for complete returns of invoices containing a voucher:

In case of a complete return with a redeemed voucher, the voucher should also be returned automatically.

The voucher should also be reactivated automatically and ready to use again.

This is an add on functionality.

Temporary phone number in TA File

We have added so that phone no. at temporary delivery address replaces the customer's telephone number in the TA system file.

We have set up a job that clears temporary delivery addresses as a customer cannot have an infinite number of temporary delivery addresses.

This can be used if you want all customer orders from a marketplace to go into one and same customer number in Harmoney but have different temporary delivery addresses, the end customer.

Change Pick up point on the Customer/Order page

We have opened up so you can choose pick up point on customer order on the customer order page even if you use generic mode of transport.

Zip code and pickup point is daily updated with help of a file from PostNord.

This only applies to Sweden.

Season/Period added in the article file to external WMS

We have added season/period in the article file (ShowStockItem), this is sent to external WMS.

Mapping is also done if the receiving system has another file layout than Harmoney.

You decide which FOK that is the guiding regarding the season/period.

Harmoney Core

Minor issues fixed

TMS-Consignor:

- Adjustment to send "AdditionalCity" (State) when creating shipments for USA.
- Adjustment for sending the correct customs tariff no to Consignor when creating shipments to countries which require customs handling.
