

Release date: 2023-10-10

Harmony Released Features

Feature 26987/ECS-10651 - Create underlying tables for history

Product development where Harmony saves the exact location of what was sent to the external partner for invoice method "generic invoice".

We have made development in the generic flow internally in Harmony. It only applies to generic invoices to Klarna, Qliro, Avarda och Adyen.

Minor adjustments

ECS 12307 - "Parameter that ignores an incorrect discount condition when purchasing from web or store."

Orders from web/store, will ignore "Automated set up" if the item has no price.

Only article variants that have no price in the current Sales channel will be ignored.

Orders from customer service will still get the error "Item XXX XXX XXX is missing price, please contact the market / IT department."

The idea with this parameter is that customer service should give attention to the fact that a discount is set incorrectly, but the web and store just ignore the error to prevent interruption of sales.

If you are interested in this function, contact EC.

ECS 27858 - Harmony Help - The search functionality does not work

When the help is opened, it now works when the user uses the search bar, which had stopped working. To achieve this, a new browser has been created.

Harmony Desktop Client

- Reload of Harmony for a new version is required.

If you are unsure whether you have downloaded a new version, you can check the version number of the following component and compare it to the information stated below:

- PxxDelsystemWarehouse: (Version number will be updated and sent out once the release has been completed).

For further information about the new Harmony client see the Harmony help "Latest version of Harmony":
